

## Pre-Visit Planning Incentive

The UHC MA plan has recently introduced a pre-visit planning program in which providers are now eligible to receive an additional bonus of \$75 for UHC MA patients. Pre-visit planning involves an extra step of preparation that can help to ensure an efficient, informed, and high quality care visit. In order to receive the additional bonus, a provider must complete the pre-visit planning prior to the UHC patient's annual care visit. A "PVP bonus eligible" banner alert will be added to all UHC patients in Allscripts.

The following text template details the specific information that should be reviewed. To access, click on Task List > New > choose **PVP** as the task type > type **.PVP** in the comment field to access the template.

The screenshot displays the "Task Detail -- Webpage Dialog" window. The "Task" tab is selected, and the task is assigned to the "Population Health Team". The task type is "PVP", with a priority of "Routine" and a status of "Active". The comment field contains the following text:

The patient needs the following:

- Mammogram:
- Colonoscopy:
- Statin therapy:
- Refills of asthma medication:
- Refills of depression medication:
- DXA/osteoporosis medication:

For diabetics:

- Repeat A1c:
- Nephropathy screening:
- Diabetic eye exam:

Need to review the following:

- Elevated blood pressure at last visit?:
- Advance Care Planning present in chart:
- Follow-up on testing/referrals ordered at last visit?:
- Immunizations up to date? flu/pneumo/COVID-19?:
- Recent ER/IP admissions?

Once a patient's pre-visit planning is complete, providers will forward this task to the 'Population Health Team' in Allscripts, and we will submit the necessary attestation to UHC.

**Helpful Tip:** As a reminder, providers can create this task to send to themselves and set it to pop in on the date of the Annual Care Visit by changing the Activate date on the task.
