Tobacco Screening and Cessation

Most of our patients already have a tobacco status documented due to Quality Programs, however, the status may not have been reassessed in a few years.

On the **Problem** tab, change the filter to **Social History**. If a smoking status is there already but has not been assessed recently, click on the piece of paper to assess the problem.

Name	ICD-10	Last Assessed
Problems		
Living alone	Z60.2	23-Aug-2016 Briggs, Monaco
Recently divorced		11-Jul-2019 Briggs, Monaco
Smoker	F17.200	[Yellow Box]

If a smoking status is not listed, click **New** at the bottom of the screen to add the current tobacco status. Adding the status will automatically assess the problem.

If you have a patient that is a tobacco user, **action is required**. When placing orders in Allscripts you may notice an Order Group called **Tobacco Cessation** on the **Rx** and **Instruct** tab. Clicking on the Tobacco Cessation folder will give you a few suggestions that will close the gap. **Not every department will have the Tobacco Cessation folder but if you would like it added for your department, please contact the EHR team and it can be added.**

The Order Groups may not be visible if you have your QuickList on, so turn it off to view the folder.

- No Reported Medications
- BMI
- Depression
- Fall Risk
- JCFM Diabetic Care
- JCFM Osteoarthritis
- Tobacco Cessation
 - Nicorette 2 MG Mouth/Throat Gum
 - Nicorette 4 MG Mouth/Throat Gum
 - Smoking and tobacco-use cessation counseling visit, 3-10 m...
 - Smoking and tobacco-use cessation counseling visit; >10mi...
 - Varenicline Tartrate 1 MG Oral Tablet

Please note, items in the tobacco cessation folder are only suggestions. Ordering a medication or providing tobacco cessation will close the gap.

Again, if you are not seeing the folder and would like it added to your department, please contact the EHR team.
